

Halspan® Prima

First for Environmental Performance and Value

Halspan is pleased to confirm that our tried and trusted Prima range of internal fire door blanks is now even greener.

First for green buildings

Developed in response to the growing demand for affordably priced, environmentally friendly products, Prima now features reduced formaldehyde emissions.

Independently certified to just 0.05 parts per million, Prima door blanks and cores now satisfy both BREEAM and the even more stringent LEED requirements for formaldehyde emissions.

A more cost-effective alternative than NAF (non-added formaldehyde) particle board, though offering matching emission levels, Prima is the ideal choice for Green Building projects.

Formaldehyde emissions		
Class E1	CARB II	Prima E.05
Max 0.10ppm	Max 0.09ppm	0.05ppm

FSC® Chain of Custody certified

Low formaldehyde emissions are just one aspect of green building requirements. Prima door blanks and cores are also manufactured from sustainably-sourced materials.

Prima is FSC® Chain of Custody certified, complies with EU Timber Regulation (EUTR) and can also comply with PEFC™ upon request for PEFC™ materials. Whichever timber certification scheme you're working to, Prima has it covered.

The mark of responsible forestry

Environmental working practices

As well as being made from sustainably-sourced materials, Prima is manufactured in mills certified for Environmental Management in accordance with the ISO 14001 international standard.

Halspan is also ISO 9001 certified for Quality Management, meaning that our door blanks and cores are manufactured to the highest standards.

Quality you can trust

Rated at 30 up to 90 minutes' fire resistance, the Prima range features Halspan's unique 3-layer particle board. Specifically designed for the purpose, using a complex combination of chemical and engineering development, this produces doors of altogether superior quality, strength and overall performance.
